Education

BS–MS Dual Degree in Mathematics *August 2021 – May 2026*
Indian Institute of Science Education and Research, Pune
CGPA: 8.2/10
MS Thesis Evaluation: 87.3/100

Relevant Coursework: Differential geometry and Lie groups, Algebraic topology, Algebraic geometry, Functional analysis, Rings and Modules, Graph theory and combinatorics, Quantum Field Theory, Gravitation.

Independent Study and Reading Projects: Poisson geometry, coisotropic and Dirac reduction, Lie algebroids and groupoids, Poisson Sigma model, BFV/BRST reduction.

Research

Academic Visitor, International Centre for Theoretical Sciences *May 2026 – present*
Collaborator: Dr. Rukmini Dey

- Constructing explicit Fedosov-type star products on Lagrangian embeddings in $\mathbb{C}P^n$, with the aim of connecting deformation and geometric quantization on Poisson manifolds via Berezin-type methods and pullback reproducing kernel Hilbert spaces.

Master's Thesis at International Centre for Theoretical Sciences *April 2025 – May 2026*
Advisor: Dr. Rukmini Dey (rukmini@icts.res.in)
Title: *Geometric and Deformation Quantization through Examples*

- Covers geometric quantization of coadjoint orbits and Kähler manifolds, the Fedosov construction on symplectic manifolds, and the formality machinery of Kontsevich.

Semester Project on Topics in QFT *Aug 2023 – July 2024*
Advisor: Dr. Sachin Jain, IISER Pune

- Studied supersymmetric quantum mechanics and the super-Poincaré algebra via matrix models. Applied Landau equations to analyze singularities of multi-loop integrals.

Summer Reading Project in Geometry *May 2023 – July 2023*
Mentor: Dr. Mainak Poddar, IISER Pune

- Studied differential geometry with applications to general relativity.

Fellowships and Awards

- Qualified for the UGC Junior Research Fellowship (JRF), Joint CSIR-UGC NET (June 2026), Mathematical Sciences: Rank 64, 99.51 percentile
- KVPY Scholar 2021–2026
- Long Term Visiting Student Program (LTVSP), ICTS-TIFR, 2025–2026

Talks

- *Star products on Poisson manifolds from the Poisson Sigma Model*
  ICTS In-House Symposium 2026, 7 April 2026.

- *Fedosov quantization on smooth manifolds and hidden symmetries*
  ISQGD Special, 14 March 2026.

Programs and Workshops

- From Hochschild homology to topological Hochschild homology
  International Centre for Theoretical Sciences (ICTS-TIFR), 25 May – 5 June 2026.
- GENTLE Math summer school and workshop on generalized geometry and low dimensional topology
  UAB Barcelona, 5 – 12 July 2026.
